Services delivered by France & Germany

For more details, please contact your local dealer or consult your geographic zone price list.

EDITORIAL

A range of Services to optimize the performance of Sames equipments

For decades **Sames** has been designing, manufacturing and selling industrial equipment to enable the bonding, protection and embellishment of your products. These equipments allows you to do the impossible: dose highly viscous products to the nearest gram at pressures of several hundred bars, apply extremely corrosive products 24 hours a day, 7 days a week without ever failing, or even safely apply paints charged at more than 100,000 Volts through rotating bowls at 80,000 revolutions per minute, all in ATEX environments...

For you to achieve such feats in your workshops, **Sames** equipments are certainly the best tool at your disposal. But like any tool, it requires perfect mastery, rigorous installation and commissioning, and regular

maintenance. To do this, through its network of partners, **Sames** offers you a wide range of Services allowing you to use our equipments with peace of mind, to maximize performance and save consumption, time and productivity.

In this catalog of Services you will therefore find the details of the services that are available to you in terms of:

- Training in integration, use and maintenance of **Sames** equipments
- Audit
- Maintenance contract
- Factory repair
- Laboratory tests
- Turnkey projects

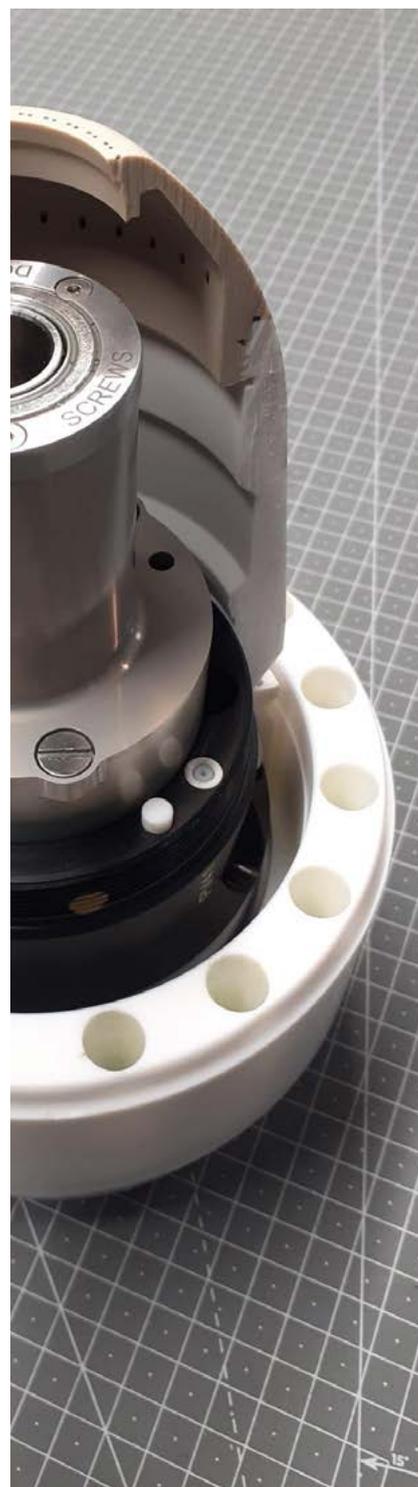

JULIEN DE FEYDEAU
Technical Director

“**Sames** offers you a wide range of Services allowing you to use our equipments with peace of mind.”

SAMES PRODUCT RANGE

A range of products that meet the needs of all application businesses

With a wide variety of ranges and services, we can meet all your application needs. Whatever your production volume and the finishing level you expect, we will be able to advise you, design and implement the most suitable solution.

TRAINING

Technical skills shared through training...

Our mission as trainers is to allow you to professionalise your staff and increase their technical skills for a better control of your facility.

Depending on the complexity of the topics covered, we support our technical sessions with 7 documentary or visual teaching tools such as PowerPoint, MCQs, maintenance poster, Memento, maintenance video, demonstration case or web training, to allow you a better assimilation of knowledge.

The offers and training programs proposed in this catalogue contribute to this objective achievement.

Web training

We are always ready to listen to your needs and to develop specific training programs with you on request. Our team of trainers remains at your disposal to support you in your future projects and your wishes to learn...

Let's develop together your technical skills to take full advantage of the performance of Sames equipment. Just what you need for maximum efficiency...

Our Customer Training Center is Qualiopi certified & registered under N° 2687 OF and certified & registered under N° 84 38 06768 38 with the DIRRECTE of the Auvergne - Rhône-Alpes region.

Equipment dismantling in workshop.

THE EXPERTS

Guy Cerruti
Technical trainer

Provider for the company Sames technologies between 1993 and 1999, Guy Cerruti returned to the company in 2007 along with experience as a site manager, to bring his expertise and rigor. It was not until 2013 that he became a technical trainer within the company.

sames  nanocoat

sames  inocoat

Yann Pinus
Technical trainer

After more than two decades dedicated to technical export sales functions (including several years at Sames technologies), Yann Pinus changed for training at the end of 2011. Since then, he has put expertise and teaching skills at the service of our customers.

sames  kremlin

Michael Schmidt
Technical trainer

Mr. Schmidt joined iNTEC in 2018 and has since been responsible for setting up and implementing all training courses for high-viscosity applications. Previously, he gained many years of experience as a team leader of production and quality assurance in the field of dosing technology as well as in the field of service/project management, also in the automotive sector.

sames  intec

TRAINING

Access and lead times: from 1 to 8 participants maximum. A delay of one month will be necessary between the customer's request and the implementation of the session or the schedule of sessions over the year. Registration can be made 1 day before the start of the session without subrogation of OPCO (collecting organization) for Intra training. Training starts when the agreement is signed, and dates are agreed with the customer. *Note: In the event of subrogation with an OPCO, additional time will be granted for the start of the training, pending approval of funding.

Teaching method: On-site training

Assessment methods / Certification of training achievements:

- Practical case studies with real-life examples will serve as assessments.
- Summary given to each trainee
- On-the-spot evaluation of satisfaction levels by questionnaire/Cold evaluation for companies/financiers

Accessibility for the disabled: Depending on the trainee's disability, we will study any specific arrangements that could be made in collaboration with the trainee (tools, rhythms or particular methods adapted to the expressed disability).

WHY SHOULD YOU TRAIN?

BSC300 demo case.

Evolving through training

The richness of a professional career is measured by the technical skills you need to acquire to meet a need to specialize even more, or simply to stay at the cutting edge of technology.

The training we offer will allow you to acquire the basics of a trade for beginners, perfect your Know-How or teach you the mastery of technique and methodology of preventive maintenance.

Based on training programs developed by our technical experts, you will have a chance to increase your skills thanks to our strong field experience, until you become a specialist in your field of competence.

Testimony

The first referent trainer certified at Barcelona

MORALES François
Deputy Manager Sales & Technical of Spain Subsidiary

«... Big thanks for the trainers to select Oscar and his team to be graduate as official trainers...»

Mechanical disassembly with video support.

Training the trainer on new equipment.

Our expertise to support you

With the reliable technology of our Sames equipments, we offer industrial solutions to increase your productivity, improve quality while reducing your product consumption and your production costs.

Armed with our knowledge of industrial and environmental issues, we share our Know-How and expertise through our training courses and teaching supports, with the only goal of allowing you to achieve your production tool profitability objectives.

TRAINING LEVELS & CODIFICATION

PG-104-1

FUNDAMENTAL

The training will provide you with a **fundamental awareness** on a technology or a product.

Level
1

PG-104-2

MAINTENANCE

The training will provide you with both **theoretical knowledge** and **practical exercises** on a product.

Level
2

PG-104-3

CONFIGURATION

The training will provide you with **advanced knowledge** & **system configuration skills**.

Level
3

How to choose the right training course?

The objective of this catalogue is to help you choose the most suitable training for your needs.

An associated module sheet is available on request, bringing details for each training course: The objectives, the content of the program, the teaching aids used, the duration, and other useful information to guide your choices.

If you still have questions, please contact our training department (contacts on the back cover.)

BASICS

TRAINING

Airspray

Spraying

PREREQUISITE

- The trainee must have completed the following training: GC-100-1 (or having aquired knowledge through experience).

TRAINING GOAL

- To acquire the fundamental knowledge concerning the Airspray spraying technology.

PROGRAM

THE AIRSPRAY PRINCIPLE

- History and principle, paint conveying modes.
- Equipment range of guns (gravity, suction and pressurized types).
- Standard (CONV) Airspray, and low pressure Airspray (HVLP / LVLP).
- Adjustments and possible defects with Airspraying with a troubleshooting review.
- Fields of Airspray applications.

APPLICATION TRIALS

- Actual trials on metallic, and / or paper sheets.
- Effects of gun adjustments (air levels, positions of knobs) on spray patterns.
- Limits of each spraying technology.
- Use of a thickness gauge.

GA-100-1

Level 1

DURATION

Training can be scheduled from 08:30 AM to 12:00 PM and from 13:00 PM to 17:00 PM

LOCATION

Taking place at the training center of:

Airmix®

Spraying

PREREQUISITE

- The trainee must have completed the following training: GA-102-1 (or having aquired knowledge through experience).
- Basic notions about general physics and arithmetics.

TRAINING GOAL

- To acquire the fundamental knowledge concerning the Airmix® spraying technology.

PROGRAM

THE AIRMIX® PRINCIPLE

- The Airmix® principle.
- Comparison between Airmix® and Airless®.

POSITIONING AND TRANSFER RATE OF AIRMIX®

- Transfer rate of Airmix®.
- Transfer rate and particules speed.

STANDARD CONSTITUTION IN MANUAL APPLICATION

- The association of a gun and a paint pressurisation pump.

THE XCITE™ GUN

- The Airmix® Xcite®+ gun.

THE VX24 AIRCAP AND AIRMIX® NOZZLES

- VX24 aircap.
- Adjustment of the spraying spurt.
- Adjustment of the spurt height.
- Standard Airmix® nozzles.
- Fine finish Airmix® nozzles.

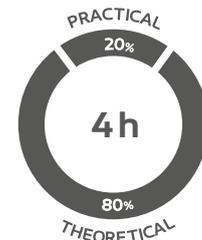

THE AUTOMATIC GUNS

- The ATX / AVX sprayers and their differences.

GA-101-1

Level 1

DURATION

Training can be scheduled from 08:30 AM to 12:00 PM and from 13:00 PM to 17:00 PM

Airless®

Finish & protective Spraying

PREREQUISITE

- Basic notions about general physics and arithmetics.

TRAINING GOAL

- To acquire the fundamental knowledge concerning the Airless® spraying technology.

PROGRAM

THE AIRLESS® PRINCIPLE

- The Airless® principle.
- General physical values.
- Pressures and spurts homogeneity.
- Constitution of a basic equipment.

FLAT NOZZLES AND REVERSIBLE NOZZLES

- Flat spurt nozzles.
- Flat spurt nozzles's chart.
- The diaphragms.
- The reversible nozzles.

AUTOMATIC SPRAYING

- HP sprayers for automatic systems.

SKILL™ NOZZLES

- SKILL™ nozzles for HP automatic sprayers.
- The advantages about SKILL™ nozzles.
- The construction of the nozzle.
- SKILL™ nozzles / codification.
- SKILL™ nozzles's chart.

FILTRATION AND PRESSURE DROPS

- The filtration chain of an Airless® system.
- Pressure drops.
- Simplified calculation for pressure drops determination with graph.
- Required pressures.

Paint

Knowledge

PREREQUISITE

- Basic academic knowledge of arithmetic and general physics.

TRAINING GOAL

- Acquire basic knowledge about painting.

PROGRAM

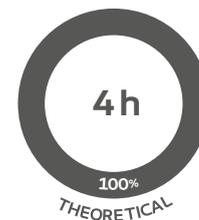

KNOWLEDGE OF ONE- AND TWO-COMPONENTS PAINTS

- Paint constituents, viscosity, dry extract.
- Constraints on the application of paints: temperature, humidity and dew point influences.
- Review of paint technical data sheets.
- Calculations of proportions in bi and tri-components.
- Use of rules and proportion cups.
- Use of the method via weighing, with identical and different densities.

Electrostatic

Application

PREREQUISITE

- Basic notions about general physics and chemistry.

TRAINING GOALS

- To know the principles of electrostatic.
- Define the parameters influencing the electrostatic force.
- To know the different types of charge.
- Define and alert on the precautions of use.

PROGRAM

INTRODUCTION TO ELECTROSTATIC

- Fundamental principles.

ELECTROSTATIC APPLIED TO THE PAINT

- Parameters characterizing the force.

THE FIELD

- Parameters characterizing the field.

THE CHARGE

- Different types of charges.

Bell cup

Application

PREREQUISITE

- Academic background in physics and chemistry.

TRAINING GOALS

- To know the principle of forming the paint film by rotating bell cup.
- To define the parameters influencing the application.
- To know the different types of electrical charges.
- To know the risks inherent in the electrostatic process.
- To know how to recognize defects and their origin.

PROGRAM

GENERAL APPLICATION

- Film formation in the bell cup.
- Film thickness at the edge.
- Droplet formation.
- Size of fillets / droplets.
- Distribution of droplet sizes.
- Granulometry synthesis.
- Forces exerted on the droplet.
- Internal load.
- External charge.
- Transport of the drops.
- Rotation effect.

SAFETY - ELECTROSTATIC

- Risk of ignition.
- Risk of electric shock.

PRACTICAL EXAMPLES

- Main aspect defects.
- On thickness / edge stitching.
- Faraday cage, penetration.
- Sink.
- Lineage, overlapping, overlapping impact.
- Marbling, homogeneity.
- Colorimetry.

Robotic

Application

PREREQUISITE

- Knowledge of the automotive paint industry.

TRAINING GOALS

- To know the painting process.
- To know the norms and regulations safety concerning the painting environment.
- To know the notions of electrostatic and the electrostatic application with a rotating bell cup.
- To know the application settings.
- To know how to recognize the application defects.

PROGRAM

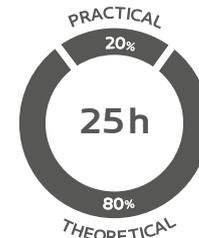

GENERAL PRESENTATION

- Body painting process.
- Bumper painting process.
- Norms and safety regulations.
- Customer expectations.
- Sames range.
- The paint.
- Electrostatic concept.
- Electrostatic application with rotating bell cup.
- The application settings.
- How to prepare an application test.
- Paint application failure.

Powder

Thermosetting powder application

PREREQUISITE

- Basic academic knowledge of arithmetic and general physics.

TRAINING GOAL

- To acquire fundamental knowledge about thermosetting powder application.

PROGRAM

THERMOSETTING POWDER COATING

- History.
- Powder coating.
- The components of a powder coating.
- Nature of powders.
- Powder manufacturing process.
- Particle size.
- Coating thickness.
- Drying of powder coatings.
- Why use powder coating?
- Electrostatic application.
- Powder installation.
- Electrostatic powder coating equipment.
- Defects.
- Powder process optimisation.
- Preventive maintenance plan.
- Equipment checklist.
- Maintenance faults.
- Preventive maintenance.

HT Hydro

Connections

PREREQUISITE

- Knowledge of the automotive paint industry.

TRAINING GOALS

- Present the good practices of installation for a water soluble, water dilutable, or conductive not inflammable paint antenna.
- To learn the rules allowing the appropriate fitting for HT Hydro connections.

PROGRAM

IMPORTANT INFORMATION

- Ground connections and equipotentiality.
- Discharge time.

INSTALLATION RULES

- Installation outline with the insulating array.
- Installation outline with the CPH 301/2 pump.

HIGH TENSION CABLES

- Ground resumption: Necessary equipment.
- High Tension cable preparation.
- High Tension cables connections.
- Ground connections for High Tension cables.

THE DISTRIBUTOR

- Necessary equipment.
- Assembly of the HT distributor.

Mechanics & Electrics

Basic principles

PREREQUISITE

- None.

TRAINING GOAL

- During this training session, the basic principle, the functionality and the mechanical and electrical design of all components are explained in detail.

PROGRAM

SYSTEM BASICS

- System basics.

DESIGN AND FUNCTIONS OF BARREL PUMPS

- Inductive sensors and their significance.
- Pump control system.
- Pneumatic until.
- Follower plates.
- High pressure pump.
- Seal kits.

DESIGN AND FUNCTIONS OF 1K DOSING UNITS

- Dosing chamber.
- Inlet valve.
- Outlet valve.
- Seal kits.

TRAINING

A25 Flowmax[®]

Automatic gun

PREREQUISITE

- The trainee must have completed the following training: GC-100-1 (or having aquired knowledge through experience).
- Basic notions about general physics and arithmetics.

TRAINING GOALS

- To know the use types, the operating procedure, the components of the A25F
- To know the pressure and air volume values for an optimal A25F functioning.
- To know how to disassemble and reassemble an A25F and the operations / frequency of the preventive maintenance.

PROGRAM

SPECIFICATIONS

- Description.
- Technical characteristics.

PARAMETERS AND USE

- Functioning.
- Parameters.
- Use of the gun.

DAILY UPKEEP

- Product circuit rinsing.
- Gun cleaning.
- Aircap cleaning.

INSTALLATION STANDSTILL

- Less than 3 hours standstill and long duration standstill.

DISASSEMBLY & REASSEMBLY

- Gun replacement.
- Needle and impermeability cartridge replacement.

A28, A29, A3

Automatic gun

PREREQUISITE

- The trainee must have completed the following training: GC-100-1 (or having aquired knowledge through experience).
- Basic notions about general physics and arithmetics.

TRAINING GOALS

- Acquire the fundmental knowledge about the pneumatic spraying technology.
- Understand the Sames dedicated brochures.

PROGRAM

THE AUTOMATIC SPRAYERS

- Functioning principle.
- Range presentation of the A28 HPA, A29 HPA, A29 HTI and A3 HPA models.
- Standard sprayings and low pressure sprayings (HVLP / LVLP).
- Parameters and possible faults during application.

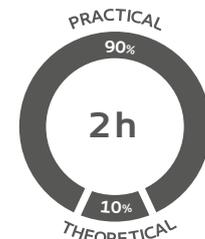

AIRSPRAY SPRAYING TESTS, IN THE TEST BOOTH

- Painting preparation, viscosity set-up.
- Paint spraying with manual pneumatic guns on paper sheet and / or slabs.
- Deduced impacts of parameters.
- Controls of the deposit thickness / usage of a wet film gauge.

TRP501 / TRP502

Automatic gun

PREREQUISITE

- The trainee must have completed the following training: GC-100-1 (or having aquired knowledge through experience).
- Basic notions about general physics and arithmetics.

TRAINING GOALS

- To know the use types, the operating procedure, the components of the TRP501 / TRP502.
- To know the pressure and air volume values for an optimal TRP501 / TRP502 functioning.
- To know how to disassemble and reassemble a TRP501 / TRP502 and the operations / frequency of the preventive maintenance.

PROGRAM

DESCRIPTION

- Functioning principle.
- Fluids diagram.
- Technical characteristics.

- Earthing of the parts to paint.
- Starting and stopping procedures.

PARAMETERS AND INSTALLATION

- RT6180 parameters.
- The sprayers's installation.
- Assembly of the air enterings on the power supply.

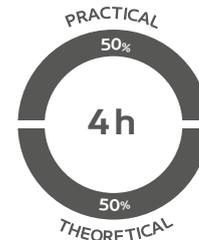

ASSEMBLY & DISASSEMBLY

- TRP Aircap.
- Power supply.
- Regulator.
- Cleaning.
- Troubleshooting.

Inogun A

Automatic gun

PREREQUISITE

- Knowledge of the automotive paint industry.
- This module is dedicated to integrators.

TRAINING GOALS

- To know the general functioning and principal components of the INOGUN A.
- To know the pressure values and appropriate air volume to use the spray correctly.
- To know how to dismantle and reassemble the spray, as well as the preventive maintenance program.
- To know the procedure and being able to identify problems for the INOGUN A.

PROGRAM

CHARACTERISTICS

- Dimensions.
- General characteristics.
- Compressed air quality.

FUNCTIONING

- Electrical connections.
- Start-up.
- Installation.

MAINTENANCE

- Summarizing maintenance chart.
- Preventive maintenance.
- Corrective maintenance.

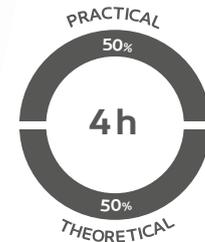

FAULTS AND SPARE PARTS

- Failures search.
- Spare parts listing.

PPH308

Bell cup sprayer

PREREQUISITE

- Knowledge of the automotive paint industry.

TRAINING GOALS

- To know the general functioning and principal components of the PPH 308.
- To know the pressure and air volume values for an optimal use of the PPH 308 sprayer.
- To know how to dismantle and reassemble a PPH 308 sprayer and its associated preventive maintenance program.
- To know the test procedure and to be able to identify problems on the PPH 308 sprayer.

PROGRAM

GENERAL PRESENTATION

- Presentation of the sprayer.
- Using the PPH 308 sprayer.
- Component's description.

TECHNICAL CHARACTERISTICS

- Technical characteristics.

FUNCTIONING

- General principle of functioning.

MAINTENANCE

- Maintenance tools.
- Disassembly and reassembly.
- Maintenance and cleaning.

INSTALLATION RULES

- Assembly of the PPH 308 (integrator package).

TEST PROCEDURE

- The PPH 308's tests.

Accubell709 EVO

Bell cup sprayer

PREREQUISITE

- Knowledge of the automotive paint industry.
- This module is dedicated to integrators.

TRAINING GOALS

- To know the functioning principle of the ACCUBELL 709 EVO sprayer.
- To know the preventive and corrective maintenance.
- To know the parameters that influence the application.

PROGRAM

GENERAL PRESENTATION

- The sprayer's composition.
- Electro-pneumatic & process arm cabinet.
- The pneumatic diagram explained.

PRINCIPAL FUNCTIONS

- The spraying.
- The electrostatic force.
- The impact modification.
- The spurt's penetration.
- Fluid circuits.

DETAILED FUNCTIONS

- The different types of bell cups and use cases.
- Pattern modification and penetration of spray.
- The different types of shaping air assemblies and use cases.
- Diagram and functioning principle at the quick disconnect plate assembly.

MAINTENANCE

- Maintenance tools.
- Disassembly and reassembly. Maintenance and cleaning.

Autostream

VOLUREX doser control unit

PREREQUISITE

- Knowledge of the automotive paint industry.

TRAINING GOAL

- Acquire the fundamental knowledge about the VOLUREX doser, associated to the AUTOSTREAM control unit.

PROGRAM

THE VOLUREX DOSER

- Constitution and functioning principle.
- The different types of thick products deposits.
- Chamber dimensions choice & theoretical calculation for cords volumes.

THE AUTOSTREAM CONTROL UNIT

- Review of the general functioning configuration.
- Creation and configuration of a « part code ».
- Creation and configuration of a « cord » segment.

AUTOMATED APPLICATION MODE

- Start-up of the AUTOSTREAM control unit.
- Calibration procedure to determine the maximal product flow.
- Complete manipulations of the VOLUREX manual mode.
- Manipulations of the control unit / VOLUREX doser, via automated cords deposits.
- Manipulations of the control unit / VOLUREX doser, for spiral cords deposits (fiberization mode).

Nanogun+

Manual gun in Airmix & Airspray technologies

PREREQUISITE

- None.

TRAINING GOALS

- To know the operating principle of the NANOGUN.
- To know how to perform preventive and corrective maintenance.
- To know the parameters affecting the application.

PROGRAM

PRESENTATION OF THE RANGE

- Application domain.
- Description of the components.

MAINS FUNCTIONS

- Technical characteristics.
- The electrostatic force.

SAFETY APPLICATION

- Functioning.
- Spraying, pattern modification and spray penetration.
- The different types of nozzles and their use cases.

PREVENTIVE AND CORRECTIVE MAINTENANCE

- Maintenance tools.
- Assembly and disassembly.
- Maintenance.
- Precautions to take.

Fpro

Manual gun

PREREQUISITE

- The trainee must have completed the following training: GC-100-1 (or having aquired knowledge through experience).
- Basic notions about general physics and arithmetics.

TRAINING GOALS

- To know the functioning principle of the FPRO gun.
- To know how to perform preventive and corrective maintenance.
- To know the parameters affecting the application.

PROGRAM

THE PNEUMATIC SPRAYING (AIRSPRAY / STANDARD AND LOW PRESSURE)

- History and functioning principle.
- Range presentation of FPRO equipments.
- Standard sprayings and low pressure sprayings (HVLP / LVLP).
- Parameters and possible faults during application.

AIRSPRAY SPRAYING TESTS, IN THE TEST BOOTH

- Painting preparation, viscosity set-up.
- Paint spraying with manual pneumatic guns on paper sheet and / or slabs.
- Deduced impacts of parameters.
- Controls of the deposit thickness / usage of a wet film gauge.

Inocart series

Powder coating cart

PREREQUISITE

- Knowledge of the powder paint industry.

TRAINING GOALS

- To identify the different components of the Inocart and to know how to connect the equipment to the rest of the installation.
- To know the operations and the frequency of the Inocart preventive maintenance.
- To know how to analyse the faults messages on the Inobox module.

PROGRAM

DESCRIPTION

- General and command interface presentation.

CHARACTERISTICS

- General characteristics.
- Pneumatic characteristics.

FUNCTIONING

- With vibrating table.
- With fluidised hopper.

INSTALLATION

- Vibrating table version.
- Fluidised hopper version.
- Connections with vibrating table (simple / double).
- Connections with fluidised hopper (simple / double).
- Connection with the Inogun and electrical plug.

USAGE OF THE E-JET2 CART

- Powder application.
- Tint switching.
- Vibrating table version.
- Fluidised hopper version.

PU3000

Mixing and dosing system

PREREQUISITE

- Knowledge of the automotive painting industry.
- Having followed the GC-100-1, PG-105-2 to PG-108-2, PP-101-2 to PP-104-2 modules (or having acquired the level through experience).

TRAINING GOALS

- To acquire the fundamental knowledge about dosing units.
- To be able to start-up, operate and configure the PU 3000 unit.
- Understand the Sames dedicated brochures.

PROGRAM

BI-COMPOSED PAINTS REMINDER

- Distinction between “lifetime in pot” and “practical use lifetime”.
- Calculation according to “part” proportions of the bi-components, from the paints technical data sheets.
- Moderation / correction of the ratio linked to the functioning mode of dosing units.

THE PU 3000

- Description.
- Technical characteristics.
- Installation.

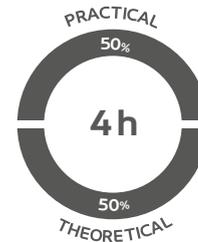

IN TECHNICAL HALL

- Complete manipulation of the PU 3000 unit.
- Operating the unit.
- Dosage verification procedures.

PK-103-2

Level 2

DURATION

Training can be scheduled from 08:30 AM to 12:00 PM and from 13:00 PM to 17:00 PM

LOCATION

Taking place at the training center of:

Meylan (38)

Stains (93)

Or taking place at the customer's site

PU 3000

Mixing and dosing system

PREREQUISITE

- Knowledge of the automotive painting industry.
- Having followed the PK-103-2 module (or having acquired the level through experience).

TRAINING GOALS

- To acquire advanced knowledge on the PU 3000 dosage unit.
- To be able to retrieve and use internal statistical data.
- To know how to load a new program.

PROGRAM

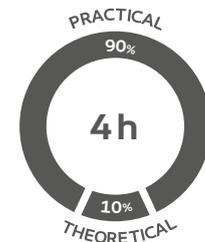

IN TECHNICAL HALL

- Realisation of the procedure via « Hyperterminal » to retrieve statistical data on PC.
- Use of the « PicKit » device to load a new program.

PK-103-3

Level 3

DURATION

Training can be scheduled from 08:30 AM to 12:00 PM and from 13:00 PM to 17:00 PM

Cyclomix™ Expert

Mixing and dosing system

PREREQUISITE

- Knowledge of the automotive painting industry.
- Having followed the PK-102-2 module (or having acquired the level through experience).

TRAINING GOALS

- To acquire advanced knowledge about the CYCLOMIX™ EXPERT electronical dosage unit.
- To know how to use the menus and configure the unit.

PROGRAM

GENERAL PRESENTATION

- Command case.
- Product connector board.
- Spraying air management.
- Flush box.
- Deported command.
- Online filter + regulators.
- The different menus.

CONFIGURATION

- Generalities.
- Main menu.
- Production.
- « Recipe choosing » menu.
- « Machine parameters » menu.
- « Recipe parameters » menu.
- « Calibration » menu.
- « Ratio test » menu.
- « Fountain » menu.
- « Consumption » menu.

Cyclomix™ EVO

Mixing and dosing system

PREREQUISITE

- Possible experience in mechanical commissioning & servicing

TRAINING GOALS

- To be in a position to commission and service the Cyclomix Evo.

PROGRAM

THE CYCLOMIX EVO / PRODUCT PANEL CONSTITUTION AND FUNCTIONS :

- CTM blocks
- Filters
- Type of flowmeters
- Injection block
- Mixing device
- Gun connection block
- Options of panel configuration

THE CYCLOMIX EVO / USE OF THE HMI :

- Understanding of all the general setting screens
- Dosing control process
- Types of injections
- Types of flushing sequences
- Paint optimization and colour push processes
- Recipe setting
- Commissioning

Upside

Color change block for robotic

PREREQUISITE

- Knowledge of the automotive paint industry.

TRAINING GOALS

- To identify the UPSIDE's main components.
- To know the different use configurations of the UPSIDE.
- To know the theoretical functioning of the UPSIDE.
- To know how to perform the preventive maintenance.
- To see different use processes of the UPSIDE.

PROGRAM

GENERAL PRESENTATION

- Description of the UPSIDE.

TECHNICAL CHARACTERISTICS

- The different configurations.

FUNCTIONALITIES

- The circuit's filling.
- The circuit's rinsing.

MAINTENANCE

- Maintenance tools.
- Disassembly and reassembly.
- Maintenance.
- Faults.

BSC 300

Turbine speed regulation unit

PREREQUISITE

- Knowledge of the automotive paint industry.

TRAINING GOALS

- To present the characteristics of the BSC 300 turbine control unit, its functions, and its different elements.
- To allow electrical and mechanical integration of the unit to replace the BSC 100 board.
- To explain the operating modes and configure the unit.
- To analyze the faults.

PROGRAM

GENERAL PRESENTATION

- Characteristics of the BSC 300 turbine speed regulation unit.

THE MODULE'S ELEMENTS

- Display.
- Network communication module.

THE DEVICE'S FUNCTIONS

- Regulation functions.
- Frequency / Voltage converter.

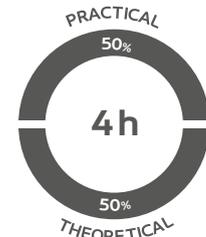

OPERATING MODES

- Remote Display.
- Remote Mode / Local Mode.
- Start and change of set point.
- Stop phase.
- Brake action.
- On speed and under speed.
- Reading pressures.
- First start.
- Configuration of the unit.
- Maintenance.

REV800

Installation control unit

PREREQUISITE

- Knowledge of the paint / powder industry.

TRAINING GOALS

- To know the different functioning modes of the REV 800.
- To know the different setting parameters of the REV 800.
- To know how to configure the unit and analyze the faults messages.

PROGRAM

GENERAL PRESENTATION

- General architecture.
- News.
- Use.
- Principle diagram.
- Command concept.
- Main menu.

FUNCTIONING

- RFV configuration.
- Spray-up table configuration.
- Manual mode.
- Automatic mode.
- System configuration.

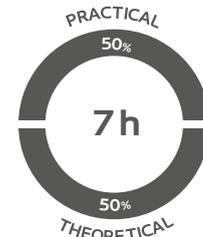

DIAGRAMS AND CHARACTERISTICS

- The module's architecture.
- Rear view of the module.
- View of the module's connections.
- General electrical installation diagram.
- Electrical characteristics.
- Electrical fittings.
- Dimensional characteristics.

FCR

Control cabinet

PREREQUISITE

- Knowledge of the powder paint industry.

TRAINING GOALS

- To know the different modules.
- To know the different configurations.
- To know the operating modes.
- To be able to connect the cabinet.

PROGRAM

GENERAL DESCRIPTION

- Description of the cabinet and the different modules.
- Presentation of the different configurations.

ELECTRICAL AND PNEUMATIC INTERFACES

- External fittings of the cabinet.
- FCR module.
- MCR module.
- TCR and CRN modules.
- REV 800 module.

FUNCTIONING

- Functioning principle.
- The different functions.
- The interaction between the different modules.

FAULT MESSAGES ANALYSIS

- Messages explanation.
- Description of the manual mode.

Prima™ 01D100

Double Diaphragm pump

PREREQUISITE

- The trainee must have completed the following training: GC-100-1 (or having aquired knowledge through experience).
- Basic notions about general physics and arithmetics.

TRAINING GOALS

- Acquire fundamental knowledge on Sames pneumatic pumps's technology.
- Being capable of starting, operating, and configuring membrane pumps.
- Understand the Sames dedicated brochures.

PROGRAM

THE PNEUMATIC SPRAYING

- Functioning principle for the Prima™ 01D100 double diaphragm pump
- Air motors principles.
- Pressure ratio (calculation method and use).
- A pump's flow.
- Choosing a pump model.
- Airspray spraying in the test booth.

FCG

Gear pump

PREREQUISITE

- Knowledge of the automotive paint industry.

TRAINING GOALS

- To know the main architecture of a Fast Clean Gear (FCG) pump.
- To know the theoretical functioning of the pump.
- To identify the pump's main components.

PROGRAM

GENERAL PRESENTATION

- FCG pump's general architecture.

FUNCTIONING

- Functioning of a volumetric pump.

DESCRIPTION

- The front flange.
- The bearing.
- The central chamber and the master gear.
- The rear flange.

CHARACTERISTICS

- General characteristics.

CONFIGURATIONS POSSIBILITIES

- FCG pump only.
- FCG pump equipped with a Sames regulator.

MAINTENANCE

- Maintenance tools.
- Disassembly and reassembly.

REGULATOR

- Maintenance tools.
- Maintenance.

RFV 2000

Robotic equipment

PREREQUISITE

- Basic notions about general physics and arithmetics.

TRAINING GOALS

- To define the general architecture of the equipment.
- To identify the assemblies's functions that compose the equipment.
- To associate to each function the corresponding equipments.
- To define the configuration and the operations of usual upkeep.

PROGRAM

GENERAL PRESENTATION

- Health and safety measures.
- Use domain and possibilities.
- Description.
- Characteristics and bulk.
- Unboxing.
- Installation.
- Loading the robot.

USUAL UPKEEP

- Mecanism.
- Preventive maintenance.

REPAIRS

- Incidents, causes and associated repairs.

POTENTIOMETER REPLACEMENT

- Angular tuning of the potentiometer.

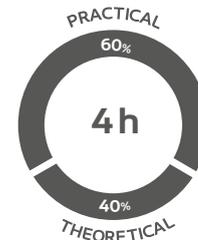

SPARE PARTS

- RVF 2000.

Painting antenna

PREREQUISITE

- Knowledge of the automotive paint industry.
- This module is dedicated to engineering projects.

TRAINING GOALS

- To know the instructions to use the sprayer.
- To know how to perform the preventive maintenance.
- To know the influence of the parameters on the application.

PROGRAM

GENERAL PRESENTATION

- General architecture.
- General functioning principle.

THE STATION ENVIRONMENT AND THE OPERATORS SAFETY

- Relation with the external equipments.
- Presentation of the safety elements.

ELECTRO-PNEUMATIC CABINET & PROCESS ARM

- Explanation of the pneumatic diagram.
- Visualization of all the elements in the control cabinet & on the robotic arm.
- The main functions of the sprayer.
- Sequence and cycles.

PREREQUISITE

- Previous participation in one of the TA-211-2 , TA-221-2 or TA-230-2 training modules.

TRAINING GOAL

- This training session addresses the control/operation and relevant settings of the user interface. Analyzing and interpreting records is practiced using examples.

PROGRAM

OPEN SCOPE VIEW	SIGNAL SEQUENCE „ESTABLISH STANDBY“
START RECORDINGS	SIGNAL SEQUENCE „DOSING FILL“
SAVE/EXPORT PROJECTS	SIGNAL SEQUENCE „PURGING“
OPEN SAVED PROJECTS	SIGNAL SEQUENCE „GLUE“
SCOPE VIEW INTERFACE	SIGNAL SEQUENCE „APPLICATION ERROR“
INTEGRATE CHANNEL	SIGNAL SEQUENCE „SYSTEM ERROR“
RECORDING DURATION	SIGNAL SEQUENCE „STEPPING SEAM“
TRIGGER CONTROLLED RECORDING	

TA-310-3

Level 3

DURATION

Training can be scheduled from 08:30 AM to 12:00 PM and from 13:00 PM to 17:00 PM

LOCATION

Taking place at the training center of:

Erfstadt (50)

*Or taking place at the customer's site**

Handwritten notes on the paper inside the funnel, including a diagram with arrows and the word "Diagram".

RTQ13
GNH2

32

LI

A shiny, reflective metal funnel is the central focus, resting on a sheet of graph paper. The funnel's surface is highly polished, reflecting light and the surrounding environment. Inside the funnel, a piece of paper with handwritten notes and diagrams is visible. The graph paper it sits on also has handwritten text and a diagram. The background is blurred, showing a person wearing a green garment. A bright yellow curved shape is in the top right corner.

NE AUDITS

LINE AUDITS

PPH707 dismantling.

Ground continuity measures under 500V.

A technical expertise and follow-up on site

Inscribed in a technical support program for our customers using **Sames** equipment in electrostatic powdering and painting, the line audit approach is designed to help you optimize and control your production process.

Our network of **Sames** experts is continuously trained and qualified to provide our customers with technical expertise on powder or liquid installations in which our equipment is integrated. The overall environment of your production line will be taken into account in this technical survey.

Line audit visits allow to:

- Identify critical points that may affect the reliability or mechanical integrity of the **Sames** equipment;
- Identify and contain any changes of the system from its original operating;
- Identify all wear parts and first emergency parts necessary for the continuity of your production;
- Develop a Preventive Maintenance Plan* (P.M.P.) personalized and adapted to your production environment;
- Provide on site technical advice appropriate to the situation and define training allowing a professionalisation of your operating staff;
- Identify corrective actions and their degree of urgency.

Line audit visits are scheduled in accordance with your production so as not to disrupt it. The audit of lines is above all a technical assistance.

To allow you to maintain sustainable technical performance of your production equipment in an industrial environment constantly changing and benefit from our expertise over time, **Sames** also provides preventive maintenance contracts...

() Preventive Maintenance Plan (P.M.P):*

*Issued from **Sames** technical instructions, the Preventive Maintenance Plan identifies for each subassembly constituting a specific installation, monitoring and verification operations to achieve, depending on an accurate periodicity.*

Line audits

Technical expertise on site

WE CHECK

- Your paint or powder equipment (new and old generation): The general condition of the equipment, the wear and tear and cleanliness of the bell cup, the sealing of quick disconnect plate and status of O-rings, the clogging of the injectors, the sealing of the pneumatic and paint product connections, etc...

WE ANALYSE

- Operating parameters, such as current consumption, high voltage saturation, fault history and safety parameters on HV generators; Any defects that may affect the performance or the efficiency of the equipment.

OUR EXPERIENCE TO ASSIST YOU

DURING YOUR PRODUCTION

- Survey of operating parameters.
- Measurement of ground continuity between the conveyor and the parts to be painted.
- High voltage measurements and airflow control in the booth using regularly calibrated equipment.
- Proposal of solutions and performance optimisation.

OUR TEST POINTS

- Centre distances, projector strokes and trajectory overlaps.
- Mechanical position of the middle stroke and load balancing.
- Chain tension, seizure, wear.
- Carriage and counterweight rollers mechanic backlash.
- Grounding and equipotential bonding.

OBSERVATIONS :

MAINTENANCE CONTRACTS

Maintenance TRP500 penetrant testing line.

An adapted preventive maintenance plan

The increase in the cost of consumables and energy related to equipment wear usually generates in many companies additional uncontrolled costs, that only a personalized action plan may contain. The preventive maintenance contract proposed by Sames is part of a program of technical support to our customers.

It is intended to help you optimize your production. In a research context of competitiveness and productivity, the approach taken by our Customer Support Service allows you, in the short term to improve the performance of your installation. Preventive maintenance consists of various controls as recommended by Sames Preventive Maintenance Plan.

These operations are performed by a qualified technician. Under this contract for preventive maintenance, we take care of the technical verifications and if necessary bring the appropriate settings. The local environment of your installation is included in the technical audit.

These technical visits allow to:

- Identify critical points that may affect the reliability or integrity of your Sames equipments;
- Identify and curb any abuses of the system from its original operation;
- Identify corrective actions to perform and their urgency;
- Identify all wearing parts and list emergency spares for the continuity of your production.

During a shutdown we check the internal mechanical robots up and down (and/or positionner.) We check the powder spraying and paint spraying equipment manual and automatic (new and old generation.)

We also control the correct operation of the Sames peripheral powder installations (powder coating central, filtration and recycling group) and water-soluble paint or solvent (insulating table, pump and pneumatic agitator, etc.)

Dismantling of an equipment during a maintenance.

Maintenance

Preventive maintenance contract

PREREQUISITE

- A line audit is required on the installation in order to define the scope of action for preventive maintenance.

WE CHECK YOUR INSTALLATION

- On the basis of a preventive maintenance plan tailored to your installation, prepared following a prior line audit; And equipment inspection sheets.

THE MAINTENANCE CONTRACT

WE REPLACE AND ADJUST

- The consumables defined in the contract (seals, O-rings, paint or powder pipes, micro valves, reciprocator chains, etc.)
- Functional play of carriage rollers.

PERFORMANCE MEASUREMENTS

- Ground continuity on the parts to be painted.
- Effective high voltage on shroud or nozzles.
- Current consumption.
- High voltage limitation.
- Powder flow.

Sames Application Center Paintshop & industry

Sames Application Center Paintshop & industry

The Application Center Paintshop allows scale 1 paint application tests for your parts placed on a central ground conveyor. Robots will simulate the paint process with adjusted trajectories as it would occur in your factory. Testing conducted in the Application Center can validate a process concept distinctively tailored to your specifications.

The Application Center also allows you to develop & certify all trajectories & paint brush parameters while adapting to the complete paint application of each individual part to be coated in your production facility, thus saving time & quick starting your production line.

Sames Germany Laboratory All Industries

Sames Germany Laboratory All Industries

Our test laboratory for the DACH region (Germany, Switzerland, Austria) is located in our subsidiary in Neuss. The technical centre, which was renovated in 2018, offers you the opportunity to take part in training or tests on site. Lab capabilities:

- 2 liquid application booth for manual, automatic and robotic application
- 1 robot for automatic applications of liquid paint with overhead conveyor, oven & vertical ventilation
- 1 reciprocator for the application of liquid paint with overhead conveyor, oven & vertical ventilation

Sames AMERICA Application Center All industry

Sames AMERICA Application Center All industry

Located in PLYMOUTH, Michigan, we can present our full product line from basic to advanced Product Knowledge and Process Validation testing in our Sames NA Application Center. Lab Capabilities:

- Robotic liquid application booth (conveyor, oven & downdraft ventilation)
- Automatic & manual liquid application booth with overhead conveyor, oven & horizontal ventilation
- High viscosity robotic application process platform
- Manual / robotic powder application booth

Sames ASIA Application Center All industry

Sames ASIA Application Center All industry

Located in SHANGHAI, China, we can present our full product line from basic to advanced Product Knowledge and Process Validation testing in our Sames ASIA Application Center. Lab Capabilities:

Enjoy being the best *together*

For almost a century, **Sames** has provided services and equipment for the application of liquid and powder paints, adhesives and sealants to bond, protect and beautify all types of surfaces.

We design, produce and market complete solutions - manual guns, automatic and robotic applicators, dosers, pumps and dosing machines...

We offer solutions at the cutting edge of technological innovation, serving industrial efficiency for the most challenging customers, and environmentally friendly.

In addition to delivering products, our services include the audit of your installations and consulting, training, repair and programming assistance of your robotic installations.

More than a supplier, **Sames**
is the partner of your performance.

We simply apply the most efficient solutions.
